CAREERS IN SUSTAINABILITY
City Planner

What do city planners do?

City planners are responsible for designing cities and neighborhoods. They have the opportunity to shape communities that promote inclusion, accessibility, and sustainability.
This includes planning for:
- Transportation systems.
- How land is used to balance economic, social, and environmental needs.
- Promoting sustainable urban development.

Their work includes:

	You are using similar skills when you:
Gathering feedback from local communities to understand current needs.	**Consider** other people's opinions when making decisions in a group project.
Collaborating with city officials, engineers, and other planners to propose projects that improve existing systems.	**Summarize** the important information about an event.
Creating reports and presentations using land use data to inform government plans and policies.	**Use visuals** like images, graphs, or videos to make a presentation more interesting.

Spot them at The Tech Interactive!
Visit The Tech and create a more sustainable Bay Area by adjusting the energy, transportation, buildings, and green space in your city (Sustainable Cities, Lower Level).
